

## eChange TECHNICAL SUPPORT

### Topic:

Setting the number of documents displayed in containers.

Product/Version: eChange, all versions

Date: 12/14/01

Author: Tim Catellier

### Symptoms:

### Cause:

The system defaults to loading 200 documents into the document pane before asking the user if they would like to display more. If users would like to change that number they may do so using the following instructions.

### Resolution:

To change the maximum number of search documents to load at one time you must edit the registry on the server. Back up your system registry before you make any changes to it.

1. From the Start menu, select **Run**, enter regedit, and hit Enter.
2. In the registry tree, find Hkey\_Local\_Machine\software\Motiva Software Corp\eChange\3.0X\doc server\<applicable vault>.
3. Find the property in that vault "Docmaxrowsdefault" and open. You can then edit the default number of documents in either HEX, or Decimal.
4. Close the registry window. When done you will not have to boot the server.
